Deploying Unitrends Enterprise Backup™ (UEB)

Flexible model: UEB is deployable as a virtual appliance for VMware vSphere and Microsoft Hyper-V, or as an installable Linux application.

UEB protects your total environment, large or small; simple or complex. And while other virtual backup products only cover hypervisors and virtual machines (VMs), Unitrends protects everything— virtual, physical and storage assets. Available in 4 easy to understand Editions, there is an option and deployment method well suited to the requirements of any enterprise. Each successive package from Essentials to Standard, to Enterprise through the high end Enterprise Plus Edition, builds onto the capabilities of the prior edition providing a clear upgrade path as Enterprise data protection and recovery demands evolve.

Pick your flavor: VMware or Hyper-V virtual appliance, or Linux application.
Designed from the ground up, Unitrends Enterprise Backup runs as a fully integrated, prepackaged virtual appliance on VMware (including the latest version vSphere 6), or Microsoft Hyper-V. UEB is also available as an installable Linux-based application for Red Hat Enterprise Linux (RHEL) orCentOS. To help you select, the chart below discusses differences in platform implementations. Beyond these, the UEB capabilities of each edition carry across the choices of deployment options. Please refer to UEB Edition Comparison chart for feature details of the Editions.

Unitrends Enterprise Backup	VIRTUAL APPLIANCE		LINUX DISTRIBUTION	
	VMware vSphere	**Microsoft Hyper-V**	**Red Hat Enterprise Linux (RHEL)**	**CentOS**
Protection Capacity	50 TB	50 TB	100 TB	100 TB
Backup copy to tape	X	X	✓	✓
Backup copy to USB disk	✓	X	✓	✓
Backup copy to eSATA disk*	✓	X	✓	✓
Archive to eSATA requires a SAS Controller 9211-4i on the host.				

RedHat Enterprise Linux (RHEL) and CentOS deployments require specific hardware adapters to leverage certain features, such as tape archiving. Please see the UEB Installable Software Deployment Guide and the Unitrends Compatibility and Interoperability Matrix for detailed system requirements.
